## Nifty Daily Chart

### Comments:

Nifty opened with an upward gap and remained in positive terrain throughout the day. Nifty closed at 11134 with a gain of 50 points.

On the daily chart index has formed a small bullish candle forming higher High-Low compare to previous session and has closed above previous session's high indicating positive bias. Nifty is moving towards its all-time high of around 11170 levels and if it crosses this level, further upside movement can be witnessed in near term. The index continues to move in a Higher Top and Higher Bottom formation on the daily chart indicating positive bias. The chart pattern suggests that if Nifty crosses and sustains above 11140 levels it would witness buying which would lead the index towards 11180-11200 levels. Important Supports for the day is around 11100 However if index sustains below 11100 then it may witness profit booking which would take the index towards 11080-11050 levels. Nifty is trading above 20, 50 and 100 day SMAs which are important short term moving averages, indicating positive bias in the short to medium term. Nifty continues to remain in an uptrend in the short and medium term, so buying on dips continues to be our preferred strategy.

The daily strength indicator RSI and momentum oscillator Stochastic both are moving upwards and are above their respective reference lines indicating positive bias.

The trend deciding level for the day is 11125. If NIFTY trades above this level then we may witness a further rally up to 11155-11175-11205 levels. However, if NIFTY trades below 11125 levels then we may see some profit booking initiating in the market, which may correct up to 11105-11075-11055 levels

USD/INR (Future)	68.93	0.07%	68.71	68.82	68.97	69.08	69.23

## USDINR (July Future) Daily chart

### Comments:

USDINR opened with an upward gap and traded with extreme volatility on either side to close on flat note. USDINR closed at 68.93 with a gain of 0.07 %.

On the daily chart USDINR has formed a "Doji" candlestick formation indicating indecisiveness amongst market participants regarding the direction. USDINR has extended its consolidation phase in the range of 69.20-68.60 levels and hence any either side breakout will signal further direction. USDINR is moving in a Higher Top and Higher Bottom formation on the daily chart indicating sustained up trend. Currently USDINR is sustaining above its 20 and 50 day SMA which support bullish sentiments in near term.

The chart pattern suggests that if USDINR breaks and sustains below 68.90 levels it would witness selling which would lead USDINR towards 68.80-68.60 levels. However if index crosses above 69 levels it would witness buying which would take USDINR towards 69.10-69.20 levels.

The daily strength indicator RSI is marginally above its reference line while momentum oscillator Stochastic has turned negative indicating a possible consolidation or a down move in the near term.
