Nifty opened with a downward gap but witnessed buying from the opening tick to end positive. Nifty closed at 15850 with a gain of 18 points.

On the daily chart index has formed a bullish candle and extended its couple of week's consolidation indicating a sideways trend. The index continues to move in a Higher Top and Higher Bottom formation on the hourly chart indicating positive bias. The chart pattern suggests that if Nifty crosses and sustains above 15900 level it would witness buying which would lead the index towards 16000-16200 levels. However if the index breaks below 15800 level it would witness selling which would take the index towards 15700-15600. Nifty is trading below 20 day SMA indicating negative bias in the short to medium term. Nifty continues to remain in a downtrend in the short to medium term, so selling on rallies continues to be our preferred strategy.

The daily strength indicator RSI has turned positive from the oversold territory and is above its reference line indicating positive bias.

The trend deciding level for the day is 15815. If NIFTY trades above this level then we may witness a further rally up to 15925-16000-16105 levels. However, if NIFTY trades below 15815 levels then we may see some profit booking initiating in the market, which may correct up to 15745-15635-15560 levels.
