#### **Axis Securities Equity Research**

#### Q2FY25 PREVIEW: COMMENTARIES FOR SECOND HALF OF FY25 REMAINS CRITICAL

The Q2FY25 earnings season was marked by a) Good rainfall across the country 2) Stronger E-way bill, GST collection and cargo traffic, 3) Resilient macro-economic outlook, 4) Full-year Union Budget, 5) Moderation in power demand, PMI manufacturing and Services and 6) Volatile Oil prices. Based on the normal monsoon, higher reservoir levels, government budgetary allocations are indicating green shoots in the rural recovery for the second half of FY25. Earnings growth for the quarter will be driven by Financials, IT, Telecom, Healthcare and Utilities while earnings for cyclical sectors like Oil & Gas and Metals is likely to see some decline. Overall, some moderation in the earnings growth is expected during the quarter. In this regard, commentaries on margins and the guidance for FY25 remain critical. Based on our and consensus estimates, we forecast Nifty to deliver a Revenue/EBITDA/PAT growth of 4.5%/6%/4.1% respectively for the quarter. Moreover, excluding Oil & Gas & Metals, Nifty Revenue/EBITDA/PAT is expected to grow by 6.7%/11.3%/10.2% respectively.

The market positioning shift towards large caps from the broader market in the last one month was on expected lines. Style and sector rotation are clearly visible in the market. The 'Growth' and 'Quality' theme is seeing a comeback in the last 1-Month/3-Month periods and outperforming the 'Momentum' theme by a wide margin. We believe that with the recent run-up in the market, most of the narrative is already priced in. We see near-term consolidation in the market with the breadth of the market likely to narrow further in the near term and the focus remains on style and sector rotation. Moreover, with a strong catch-up by Midcaps and Smallcaps in the last couple of months, we continue to believe their margin of safety (in terms of valuations) at current levels has reduced as compared to Largecaps. Keeping this in view, the broader market may see some time correction in certain pockets in the near term and flows are likely to shift to Largecaps. At this juncture, the long-term story of the broader market continues to remain attractive and, in this context, two themes - 'Growth at a Reasonable Price' and 'Quality' look attractive at current juncture. Currently, we foresee FY25/26 NIFTY Earnings at 1081/1225 and we will revisit our estimates post the Q2FY25 earnings season.

#### **Key Highlights for Q2FY25:**

Steady asset quality trends for the BFSI sector, earnings moderation expected during the quarter: For our coverage universe, banks that have reported their provisional numbers thus far have seen encouraging trends in deposit mobilization, while credit growth has decelerated slightly, thereby leading to LDR improvement across most banks. We expect earnings momentum to decelerate and banks (incl SFBs) under our coverage to deliver a modest earnings growth of 7% YoY

**2W** in Automobiles continue to grow faster than PVs: The Indian Automobile sector has seen a significant demand improvement with most categories witnessing encouraging traction on a YoY basis. This growth has been led by a richer product mix, higher average selling price, and moderation in the raw material prices. Most OEMs under our coverage will likely see margin expansion and improvement in profitability.

**Moderation in demand, H2 to see demand recovery in cement sector:** The continued cement demand moderation visible in Q2FY25 was impacted by (i) seasonality, (ii) heavy rainfall, and (iii) delays in budgetary allocation of funds for infrarelated projects. Historically, moderation in cement demand has been observed during election years. Overall, cement demand in FY25 is expected to be positive and is expected to grow in the range of 5%-7% in FY25. This growth will be driven by the government's emphasis on infrastructure development and sustained real estate activity.

**Consumers:** FMCG companies under our coverage are expected to experience a recovery in volume growth. Revenue growth will primarily be driven by volume growth in the low to mid-single digits, led by improved rural sentiments. Rural growth is expected to outpace urban growth. Companies with higher share of rural distribution alongside those expanding their geographical footprints, are expected to outperform their FMCG peers. The overall revenue growth trend for the Retail sector is expected to vary, reflecting a mixed-bag performance, as discretionary spending continues to remain subdued. Premium retailers such as Trent and Ethos are anticipated to perform better while value retailers will see gradual recovery.

**Slowly shaping up, Recovery expected in the IT sector**: The IT Services sector is anticipated to exhibit moderated growth in Q2FY25, primarily due to weaker discretionary spending, driven by uncertainties in macroeconomic conditions and upcoming US elections. However, non-discretionary spending is expected to see some improvement. Many large enterprises are likely to prioritize cost optimizations, resulting in an increase in cost take-out deals, vendor consolidation, and reduced discretionary spending. We expect new deals to ramp-up indicating pick-up in demand.

OUR TOP 9 "TRADING BUYS" Earnings Play: Ultratech Cement, Zomato, KPIT, Trent, Nalco, KEC Int., Healthcare global, Endurance tech and Pitti Engineering

**Note**:\*Returns expectations: 5-10%. Recommendations given in this report may differ from our long-term stock recommendations which are based on a one-year target.
